The Five Essentials

To Be:

- Open
- Aware
- Truthful
- Connected
- Committed

An Enterprise View of the Research Portfolio

NIH Roadmap

ACCELERATING MEDICAL DISCOVERY TO IMPROVE HEALTH

***Identify-Plan-Develop-Implement-Fund-
Evaluate Outcomes and
Research Opportunities***

Points to Consider

- eRA is funded to provide a core transaction system for grants and the base system to analyze all funded research projects funded by grants, contracts, and by the intramural program.
- The current eRA vision is not an integrated enterprise solution for NIH or the Department.
- OPDIVs and NIH need to examine the return on investment and the potential of making eRA an integrated solution.

How Research Initiatives Move Forward

(a patchwork view)

- Initiative planning and development
 - IC's systems
- Implement
 - eRA is the transaction system for receipt, review, award, and administer grants
 - ICs – pay lists, workflow, routing, documenting intermediate steps not currently in eRA
- Evaluate
 - eRA multiple tools to evaluate data for all funded research projects grants, contracts and intramural programs at NIH
 - IC-specific systems use eRA data (downloads or shared tables) for scientific coding and other analysis

Launching a Research Effort

**ICs
&
OPDIVs**

- ◆ Initiate concepts and initiative development:
 - ◆ **Recommend and approve:**
 - ❖ Extramural Community, Branch, Division, IC, Council
 - ◆ **Integration with future year budget planning**
 - ◆ **Implementation**
 - ❖ Tie budget changes from formulation
 - ❖ PA, RFA, RFC document generation
 - ◆ **Evaluation**

Launching a Research Effort

ICs

- ◆ Initiate concepts and initiative development:
 - ◆ **Recommend and approve:**
 - ❖ Extramural Community, Branch, Division, IC, Council
 - ◆ **Integration with future year budget planning**
 - ◆ **Implementation**
 - ❖ Tie budget changes from formulation
 - ❖ PA, RFA, RFC document generation
 - ◆ **Evaluation**

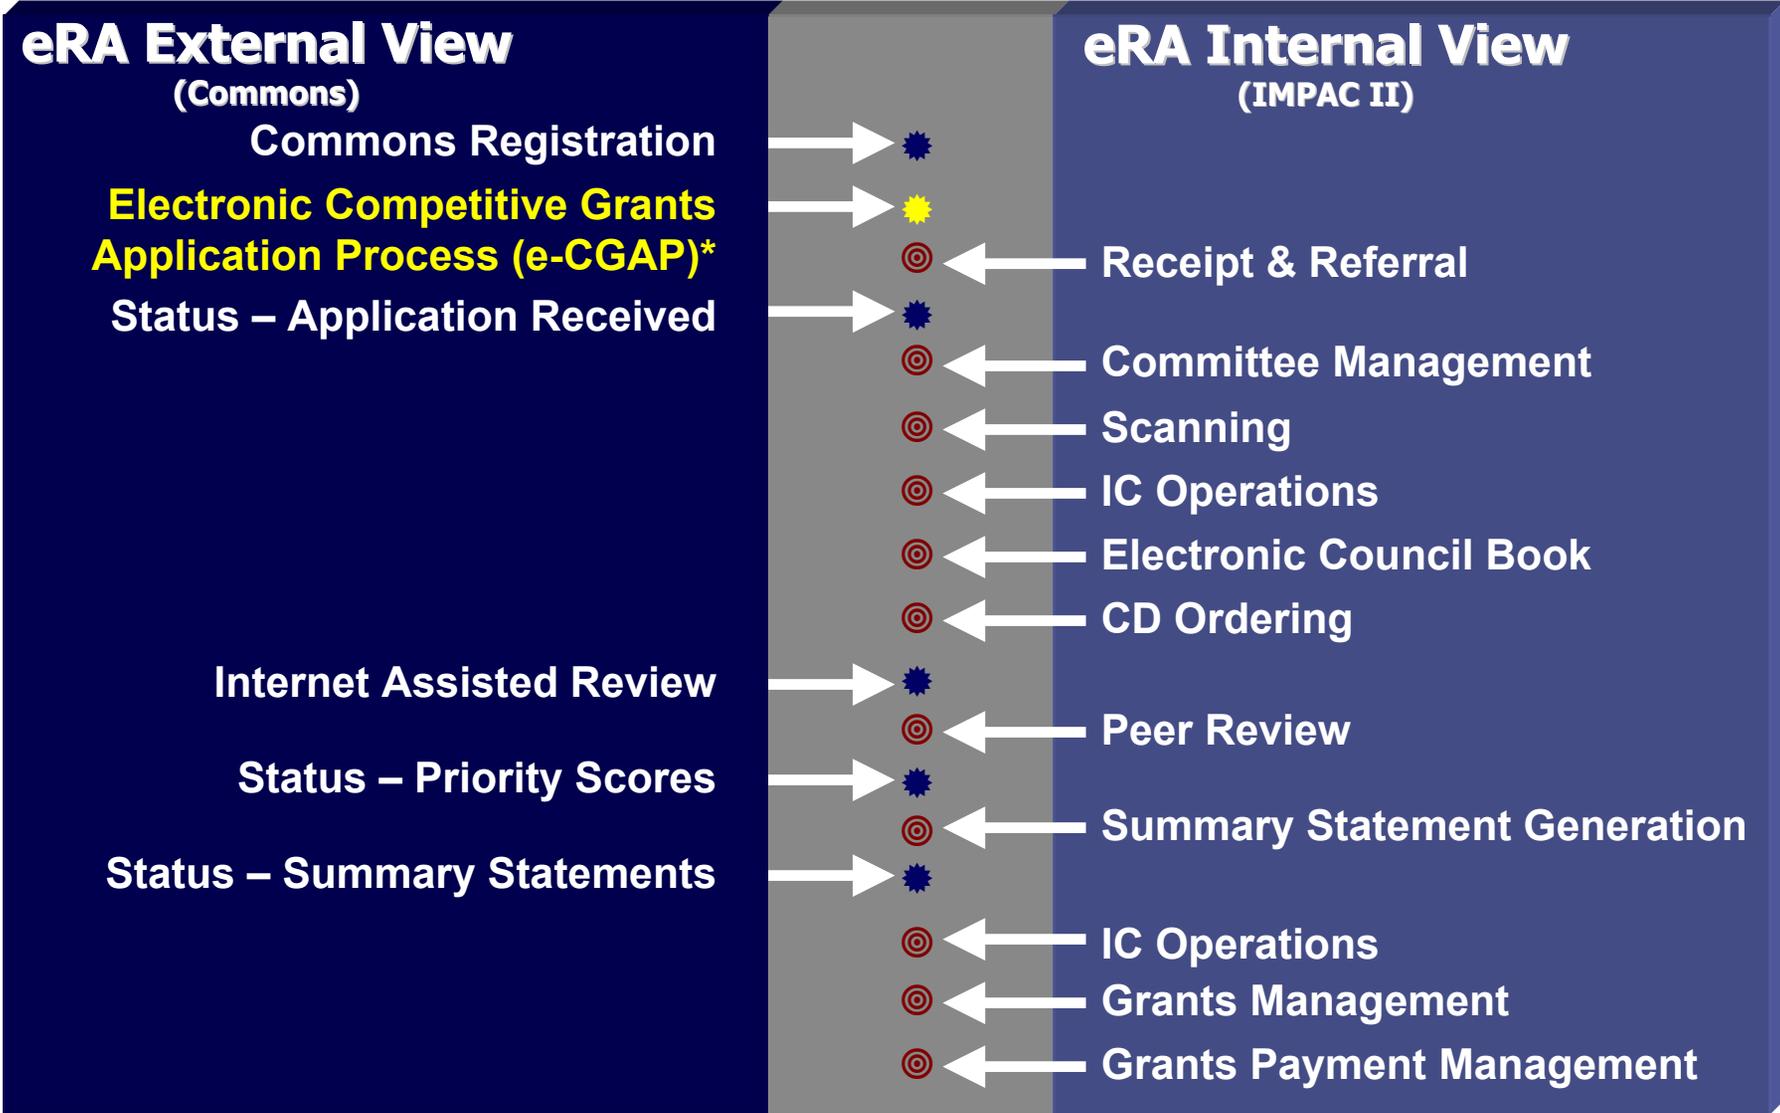

OER

- ◆ **Announce**
 - ◆ **Early Notification System (ENS) within OER**
 - ◆ **Publication in the NIH Guide/FedBiz OPPs**

eRA	<ul style="list-style-type: none">◆ Implement, analyze, and monitor the projects received, reviewed and funded for the initiative

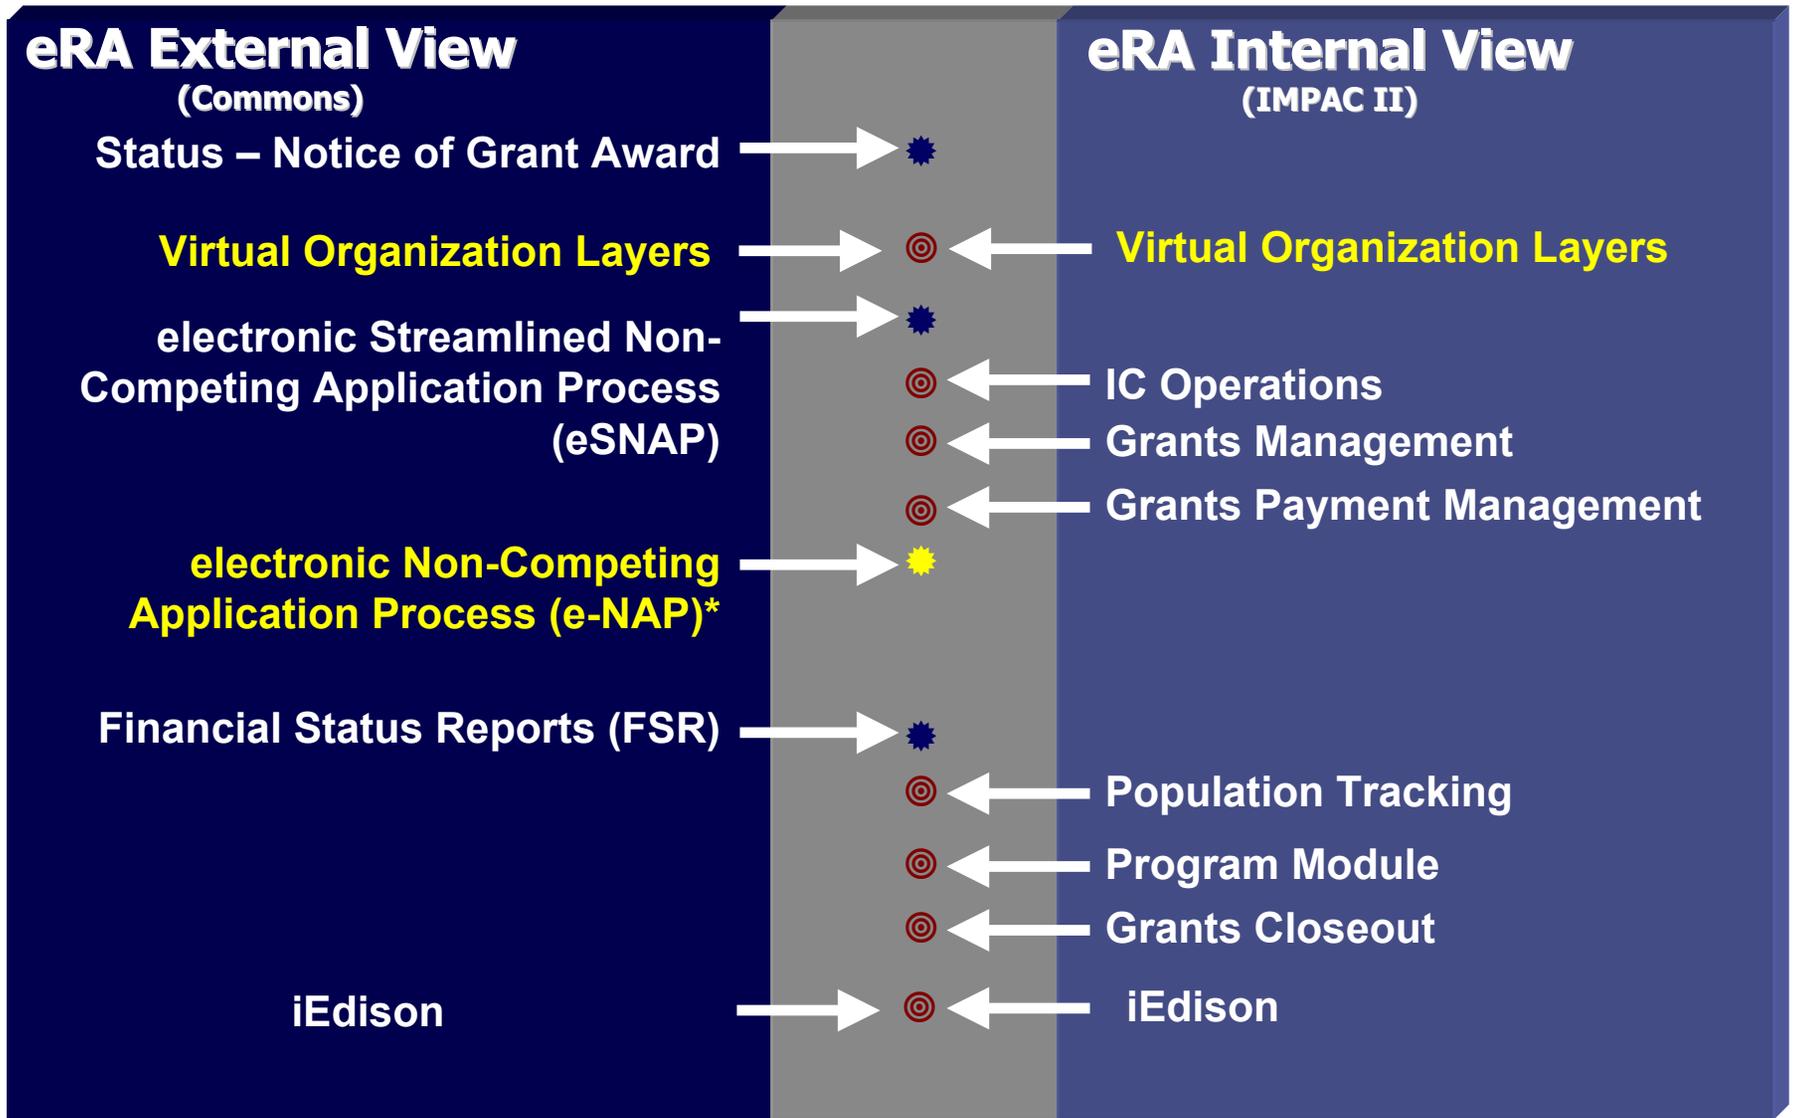

The eRA Core (Receipt Through Award Transaction Modules)

* Yellow = Modules in Development

21 Framework Modules

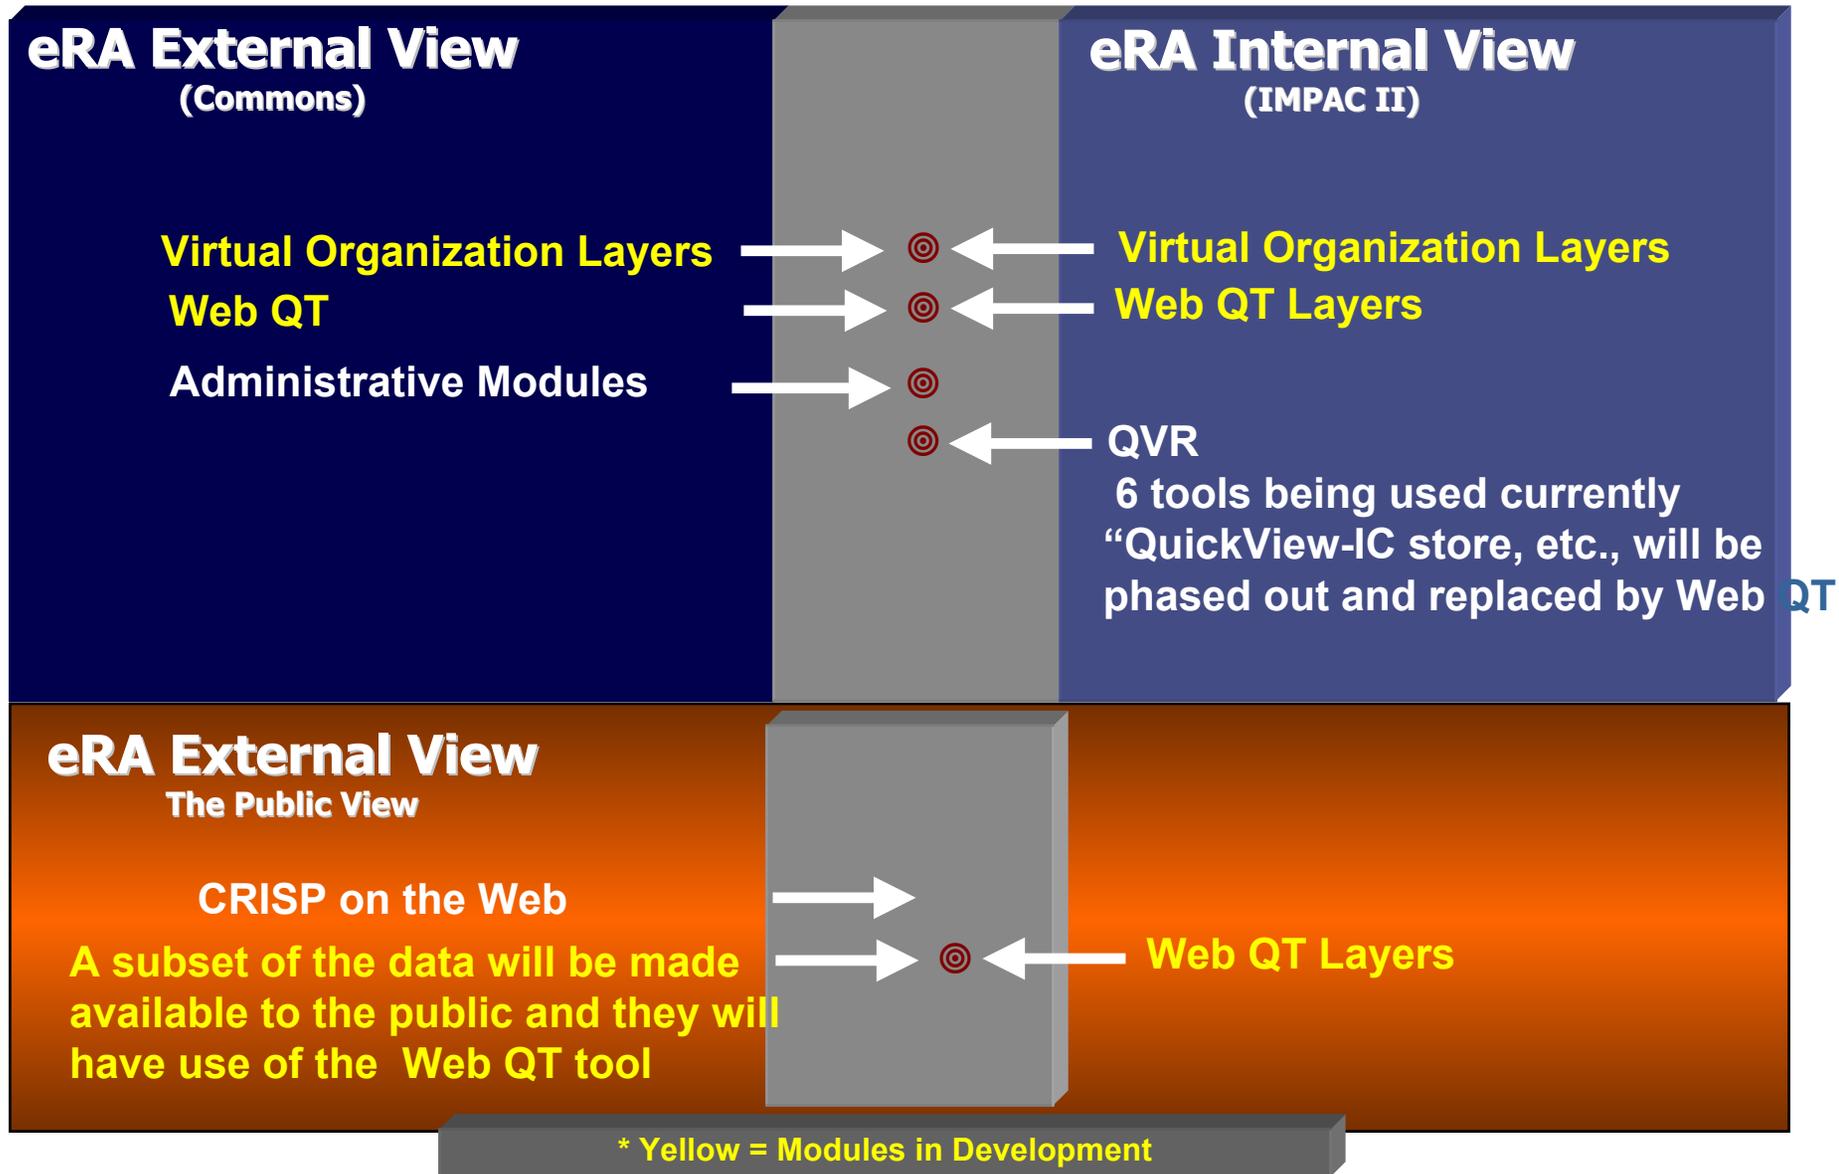

The eRA Core (Post-Award Transaction Modules)

* Yellow = Modules in Development

21 Framework Modules

The eRA Core (Aggregate Processing, Reporting Tools)

eRA Modules

IMPAC II

- Committee Management
- CRISP Plus
 - Scientific Reporting Module
- IC Operations
 - Program Management Interface
- Electronic Council Book
- Grants Payment Management
- Grants Management
- Grants Closeout System
- Paperless Business Practices (Scanning)
- Population Tracking
- Receipt & Referral
- Reporting Databases & Tools
 - QuickView
 - Grants Payment Reporting Module
 - QVR
 - J2EE Query Tool
- Peer Review
 - Summary Statement Generation
 - Internet Assisted Review
- CD Ordering
- SITS
- Trainee Activities
- User Administration Module
- X-Train
- Electronic 901s
 - Workflow Architecture

NIH eRA Commons

- ❖ Commons Base System
 - Accounts Administration
 - Profiles (IPF and PPF)
- ❖ X-Train and Status (Commons v.1 modules)
- ❖ Status System
- ❖ eSNAP
- ❖ CGAP
- ❖ FSR System
- ❖ iEdison
- ❖ CRISP on the Web

Background Modules

- ❖ ICE – IC Extensions. APIs.
- ❖ Common Mailers (will be merged into e-Notification)
- ❖ Batch Assignment Module for POs, PCCs, GMOs, GSs
- ❖ J2EE Base System (formerly the “framework modules”)
- ❖ Status Code Computation Module
- ❖ Type 5 Processing
- ❖ Type 4, 6, 7 Processing

Shared Modules

- ❖ Person Data
- ❖ Grant Folder
- ❖ Grant Update Module (GUM)
- ❖ Subproject Maintenance Module
- ❖ ICSTORE
- ❖ Edit Checker
- ❖ eRA Notifications and Mailers
- ❖ Customizable Checklists

 = Still in Development

Points to Consider

- We are missing critical opportunities to:
 - **Leverage the DHHS consolidation to add other transaction process or information needed by multiple OPDIVs**
 - ❖ A contract management system that uses the same receipt, review, and committee management modules already in place
 - ❖ Adverse event reporting, OLAW, protocol management, State Dept clearances, etc.
 - ❖ Adopting key personnel and co-PI standard terms for use across intramural and extramural
 - **Integrate business intelligence/knowledge discovery tools to:**
 - ❖ Improve, quality, efficiency, decision support
 - ❖ Analyze all research projects for gaps, redundancies, and emerging

Your Work Today is Critical

- The choices will be tough
- Additional requirements coming from on high
- Lack of clarity for OPDIVs developing data marts between the different systems that will be in use
- Budget pressures on NIH will mean additional scrutiny

The Five Essentials

To Be:

- Open
- Aware
- Truthful
- Connected
- Committed
